```

The present invention relates to the isolation of novel human secreted proteins and the polynucleotide sequences encoding them. The invention also discloses vectors, host cells, antibodies, and recombinant methods for producing human secreted proteins. The polypeptide and polynucleotide sequences for the secreted proteins. The polypeptide and polynucleotide confidences for the secreted proteins are useful for preventing, treating, andiomosting medical conditions such as hyperproliferative disorders (e.g. leukaemia or breast cancers), wounds, reproductive clisorders, blood-related disorders (e.g. haemophilia or thrombootytopaenia), immunodeficiencies (e.g. yiskot-t-Andrich syndrome or thrombootytopaenia), immunodeficiencies (e.g. graft-versus-host disease, thymic hypoplasia), autoimmune disorders (e.g. graft-versus-host disease, wiral or bacterial or Hashimoto's thyroiditis), allergies (e.g. asthma), iral or bacterial or fungal infections (e.g. AIDS or sepsis), renal disorders (e.g. kidney failure), cardiovascular disorders (e.g. angina pectoris, carebral ischaemia or congenital heart defects), respiratory continoration or golymodeles (e.g. AIDS or sepsis). The parkinson's disease), and inflammations (e.g. Crohn's disease). The polymucleotide or polympeptide may also be used as vaccine adjuvants. ABO34374-ABO34815 represent human secreted proteins or their fragments. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site at seqdata.uspto.gov/psipsDIDEntry.html Gaps ;0 100.0%; Score 1039; DB 6; Length 329; 100.0%; Pred. No. 6.7e-88; ive 0; Mismatches 0; Indels 0; Sequence 329 AA;

The invention relates to isolated nucleic acid molecules and the human secreted proteins (SPs) they encode. The proteins and nucleic acids may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate SP expression e.g. cancer, haematopoietic disorders, endocrine disorders, diseases of the immune system, inflammatory disorders and many others. Full details of disorders that may be prevented, diagnosed and/or treated by the above methods are given in the specification. The nucleic acid molecules may be used to produce their proteins. The nucleic acid and it's complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The SPs may also be used as antigens in the production of antibodies against the proteins and in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Rosen CA, Soppet DR, Carter KC, Bedn.

The anti-SP antibodies and antagonists may also be used to down regulate expression and activity. The anti-SP antibodies may also be used as diagnostic agents for detecting the presence the proteins in samples (e.g. by enzyme linked immunosorbant assay (ELISA)). The present sequence represents the amino acid sequence of a human secreted protein.

The invention relates to a novel isolated polypeptide (NOVX) comprising a mature form of any of the 37 amino acid sequence [W1] y defined in the specification. A polypeptide of the invention has antidiabetic, anoretic, cardiant, hypotensive, antiaterenial, individe, indibaterial, fungicide, protozoacide, notropation, antipaterial, fungicide, protozoacide, notropation, antipaterial, fungicide, protozoacide, notropatici, antipaterial, and protocopical, antiasthmatic, and antipaterial of a medicament for triasthmatic, and antibodies are useful in the manufacture of a medicament for relating a syndrome associated with a human disease, preferably a NOVA-associated Misorder. The nucleic acid molecules, polypeptides and antibodies are useful for treating, preventing or diagnosing diseases such as metabolic disorders, clabeles, pestry, infectious diseases up at manufacture of a medicament for treating, preventing or diagnosing diseases up antipated associated with a human disease, preferably a NOVA-associated disorders, inflammator, and protozoally anorexia, and articopies are netabolic disorders, clabeles, pestry, infectious diseases (inflammatory skin disorders, consecutation, and protozoally anorexia, inflammatory skin disorders, inflammatory skin disorders, inflammatory skin disorders, inflammatory skin disorders, inflammatory skin disorders, inflammatory skin disorders, inflammatory skin disorders, and protozoally anorexias. The nucleic acids and polypeptides may also be used as targets for the identification of small molecules or the modulate or inhibit e.g. neurogenesis, cell differentiation, haematopolesis, wound healing and angiogenesis, in generators for use in therapeutic or disapnoses (methods: The NOVA publicates of the invention of antibodies that the bid angiogenesis, in chromosome mapping, preventive medicine show homology to efficient and protosy to mally preventive medicine and protosy to mally preventive medicine and protosy to mally prevented as hybridisation protosy. In the precursor; NOV8a-5s show
                                                                                                                                                                                                                                                                                                                                                 New isolated NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders, e.g. osteoarthritis, obesity, atherosclerosis, cancer, Parkinson's disease, asthma, or infections.
                                                                                                                                                                                                                                                                  Rieger DK;

Human NOV5b protein SEQ ID NO:50.

03-JUN-2004 (first entry)

ADL57105;

```
The invention relates to a novel isolated polypeptide (NOVX) comprising mature form of any of the 37 amino acid sequences fully defined in the specification. A polypeptide of the invention has antidiabetic, anorectic, cardiant, hypotensive, antiarteriosclerotic, anorectic, virucide, antibacterial, fungicide, protozoacide, nootropic,
                                                                                                              numnan; autolateric; autorectic; catulatic; importerial; fungicide; antiarteriosclerotic; anorectic; virucide; antibacterial; fungicide; protozoacide; nootropic; neuroprotective; antiparkinsonian; antiooroutlaent; osteopathic; antiarthritic; antiinflammatory; dermatological; antiasthmatic; antilipaemic; gene therapy; fibroblast growth factor receptor 4; FGR4; complement factor Iprecursor; metaloproteinase-15 precursor; MDC3; T-lymphocyte surface antigen Ly-9 precursor; fibroblast growth factor-21; FGF-21; fibroblast growth factor-21; FGF-21; antileukoproteinase 1 precursor; LiV-1; nuclear hormone receptor NOR-1; transmembrane protein-like; beta-neoendorphin-dynorphin precursor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders, e.g. osteoarthritis, obesity, atherosclerosis, cancer, Parkinson's disease, asthma, or infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ort T, Padigaru M, Rieger DK;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 1; SEQ ID NO 50; 214pp; English.

redroptorectry, antinflammatory, dermatological, antiasthmatic, antinflammatory, dermatological, antiasthmatic, antinflammatory, dermatological, antiasthmatic, antinflammatory, dermatological, antiasthmatic, antilipaemic activity. A polymocleotide of the invention may have a use in gene therapy. The polypeptides, nucleic acid molecules and antibodies are useful in the manufacture of a medicament for treating a syndrome cassociated with a human disease, preferably a NOVX-associated disorder. The nucleic acid molecules, polypeptides and antibodies are useful for treating, preventing or diagnosing diseases such as metabolic disorders, diabetes, obesity, infectious diseases (viral, bacterial, fungal, conference). And protozoall, anorexia, cardiovascular diseases (hypertension, atherosclerosis), neurodegenerative disorders, Alzheimer's disease, Parkinson's disease, epilepsy; immune disorders, Alzheimer's disease, Parkinson's disease, epilepsy; immune disorders, Alzheimer's contexthritis), haematopoietic disorders, inflammatory skin disorders, asthma, and various dyslipidaemias. The nucleic acids and polypeptides cathat modulate or inhibit e.g. neurogenesis, call differentiation, cell contiferation, haematopoiesis, wound healing and angiogenesis, in generation of antibodies that bind immunospecifically to NoVX usbasnances for use in therapeutic or diagnostic methods. The nucleic acids are further used as hybridisation probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The NoVX cortain known human proceins NoV1a-1t show homology to citizonely growth factor receptor 4 (FGFR4); NOV2a shows homology to methology to fibroblast growth factor-21 collyaptions in NoVa-1 show homology to fibroblast growth factor-21 collyaptions. In NoVa-2 show homology to although the although to a precursor; NOV4a show show homology to although the although the above antigen by an acide antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     precursor; NOV9a-91 show homology to LIV-1 protein; NOV10a shows homology to nuclear hormone receptor NOR-1; NOV11a-11] show homology to transmembrane protein-like; NOV12a-12c show homology to beta-necendorphin precursor. The present sequence represents a NOVX polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  polypeptide variant; NOV8a-8g show homology to antileukoproteinase 1

The polypeptide of the invention demonstrates antiatreriosclerotic, cytostatic, neuroprotective, antiparkinsonian, hepatorropic, cerebroprotective, antiinflammatory, nootropic and vasotropic activities and may be useful for treating a disease or condition associated with decreased expression or overexpression of functional immune response associated proteins, while the antibody is useful for diagnosing a condition or disease associated with the expression of IRAP, such as arteriosclerosis, cirrhosis, cancer, stroke, Alzheimer's disease, Parkinson's disease and Crohn's disease. Furthermore, the molecules of the invention may be utilised during gene therapy procedures. The current sequence is that of a human IRAP protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated immune response associated proteins (IRAP) polypeptide and polymuclectide, useful for diagnosing and/or treating disorders with aberrant expression of IRAP, such as arteriosclerosis, cirrhosis, cancer and stroke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A, Elliott VS, Hafalia AJA, Richardson TW; Marquis JP, Chawla NK, Khare R, Becha SD;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                            1 KDSEIFTVNGILGESVTFPV.......NNSDSISARQLCADIAMGFR 199

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            534338
biliary glycoprotein F - mouse
biliary glycoprotein F - mouse
biliary glycoprotein
NyAlternate names: mouse hepatitis virus (MHV) receptor glycoprotein
Sybecies: Mus musculus (house mouse)
C;Species: Mus musculus (house mouse)
C;Species: Musculus (forts)
C;Accession: S34338; JC1510; A41093
C;Accession: S34338; JC1510; A41093
R;Huang, X:F; Novel, M.; Novel, G.
Submitted to the EMBL Data Library, July 1992
A;Description: A Clp-family gene present on the lactose-protease plasmid of lactococcus
A;Reference number: S34338
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          C;Superfamily: carcinoembryonic antigen; carcinoembryonic antigen precursor amino-termin
